Sustainable Sites

About Us

At JMT, our Landscape Architecture group has been an important part of our planning and design teams for many years. With the concept of sustainability taking a much more prominent role in all of our projects, JMT's landscape architects are called upon to serve an even greater role in helping guide projects to more sensitively integrate with the environment.

Our landscape architects serve as facilitators in working with project stakeholders to create context sensitive solutions that enhance the quality of life for communities. We strive to integrate complete streets principles, sustainable sites principles, and LEED® principles into all of our projects. Embracing a holistic building/site approach to planning and development, we integrate functional elements into the overall context of an area to convey a distinctive sense of place.

Transportation Planning & Design

- Complete Streets Design
- Transit Facility Planning & Design
- Gateway Signage
- Wayfinding
- Planting Design
- Streetscape Planning & Design
- Bicycle & Pedestrian Planning & Design
- Scenic Byway Planning
- Visual Quality Assessment & Management
- Stormwater Management

We have a proven track record of developing context sensitive designs that reflect our client's goals while meeting the needs of the community.

Park & Recreation Planning & Design
