

TRAILS & GREENWAYS

Part of a diversified family of solutions

jmt.com

About Us

JMT is a leading planning and design firm assisting clients in the successful planning and implementation of trails, greenways, and non-motorized transportation facilities. Our diversified team of planners, landscape architects, engineers, natural and cultural resource specialists, and construction managers works collaboratively with clients to develop plans and facilities that preserve existing resources. We provide cost-effective and sustainable non-motorized options for transportation and recreation that contribute to active communities.

Active Transportation

As a Silver level corporate sponsor for the National Complete Streets Coalition, JMT fully embraces the philosophies of Complete Streets. We work with communities at all levels to develop Complete Streets Policies and implement plans that help create truly active transportation options while offering measurable improvements to the quality of life.

Grant Funding Assistance

JMT routinely provides grant writing assistance and administrative assistance to local municipalities for a wide variety of projects involving multi-use trails and bicycle facilities. Our staff has experience obtaining and administering grants from federal, state, and local agencies and funding sources. Our established relationships with these agencies allows us to prepare winning grant applications for our clients.

Services

- Active Transportation
- Grant Funding Assistance
- Pedestrian/Bicycle Master Planning
- Pedestrian Facility Design
- Trail & Greenway Design
- Bicycle Facility Design
- Green Infrastructure

Pedestrian/Bicycle Master Planning

We provide a wide range of planning services to clients looking to effectively plan for pedestrian and bicycle facilities in their communities. We focus careful attention on developing integrated networks capable of providing ADA-complaint facilities for walkers and cyclists. JMT has successfully developed plans for multi-county networks to individual trails and everything in between.

Pedestrian Facility Design

We understand that every transportation trip begins and ends as a pedestrian. Our skilled, multidisciplinary team of planners, engineers, and landscape architects works seamlessly to create pedestrian facilities that are safe, accessible, ADA-compliant, and designed to make the pedestrian part of any trip an efficient, safe, and pleasurable experience.

Trail & Greenway Design

JMT provides all necessary design services to allow local, state, and regional governments to implement trails and greenways as critical components of their transportation and recreational systems. Our multidisciplinary team ensures that all of the necessary elements of a trail or greenway system are integrated in the design, including pavement, wayfinding signage, lighting, restrooms, and parking.

Bicycle Facility Design

We offer a full range of experience in the design and implementation of bicycle facilities, ranging from rural multi-use trails to protected bike lanes in densely-urbanized areas. Our staff of transportation engineers, traffic engineers, landscape architects, and public outreach specialists works together to provide award-winning designs for our clients that emphasize the right solution for your needs.

Green Infrastructure

Our landscape architects and LEED® Accredited Professionals take the lead in ensuring all of our transportation projects are providing environmental benefits in addition to providing transportation facilities for the public rights-of-way. Thoughtful integration of the natural environment with the built environment provides not only a better user experience, but a more sustainable strategy for the future.

JMT provides a wide range of planning services to clients looking to effectively plan for pedestrian and bicycle facilities in their communities.
